A relational report presents detailed, record-level data in a flat tabular format, where each row represents one individual transaction. In this experiment, the relational report was created in Power BI using a Table visual built from the Orders table of the Global Superstore dataset. The table contains six fields: Order ID, Customer Name, Product Name, Region, Sales and Profit. Sorting was applied in descending order of Sales so that the highest-value transactions appear first, and a filter was applied on the Region field (**[Region used, e.g. Southern Asia]**) to narrow the data for focused inspection. The report was then exported from Power BI as a **[CSV / Excel]** file to support further offline analysis. Across all transactions, total sales amount to 12,642,501.91 and total profit to 1,467,457.29.

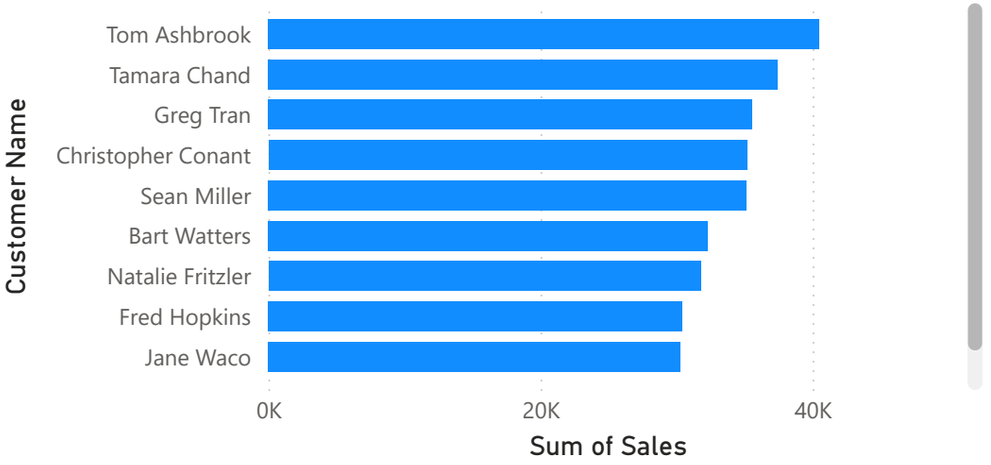

Region	Sum of Sales	Sum of Profit	Sum of Quantity
Canada	66,928.17	17,817.39	833
Caribbean	3,24,280.86	34,571.32	6299
Central Africa	1,43,630.01	35,383.71	1553
Central America	12,23,100.63	1,58,981.65	20882
Central Asia	19,311.46	-7,282.01	465
Central US	5,01,239.89	39,706.36	8780
Eastern Africa	1,27,856.02	21,900.91	1688
Eastern Asia	8,55,059.39	1,67,101.85	8922
Eastern Europe	3,10,033.44	77,084.88	3609
Eastern US	6,78,781.24	91,522.78	10618
North Africa	2,33,216.61	57,836.25	2922
Northern Europe	6,36,779.16	83,923.92	8177
Oceania	11,00,184.61	1,20,089.11	12838
South America	6,17,223.68	28,090.52	11345
Southeastern Asia	8,84,423.17	17,852.33	11822
Southern Africa	1,05,191.76	24,158.55	1096
Southern Asia	8,66,572.68	1,59,336.43	9109
Southern Europe	6,08,593.97	70,109.42	7871
Total	**1,26,42,501.91**	**14,67,457.29**	**178312**

A multidimensional report presents summarised (aggregated) data that can be analysed across several dimensions, such as geography, product and time, rather than showing individual transactions. In this experiment, a Matrix visual was used with a **Location Hierarchy** (Region → State → City) placed in Rows, and Sales, Profit and Quantity placed in Values. A hierarchy is an ordered set of fields from a broad level to a detailed level, and it enables drill-down, which means expanding a summary row into its more detailed sub-levels, and drill-up, which reverses this. Drill-down was demonstrated by expanding **[Region used, e.g. Central America]** into its states and cities, and drill-up by collapsing back to the region level. At the overall level, the report shows total sales of 12,642,501.91, total profit of 1,467,457.29 and total quantity of 178,312, giving an overall profit margin of about 11.6%.
