Role and Permission Matrix

User role	Information needed	Executive Dashboard	Business Scorecard	Sales Report	Profit / Finance Report	Regional Report	Customer Detail Report
BI Administrator	Maintains reports and security	✓	✓	✓	✓	✓	✓
CEO	Overall performance, KPIs	✓	✓	✓	✓	✓ (all regions)	✗
Finance Manager	Profit, margin, costs	✓	✓	✗	✓	✗	✗
Regional Manager	Own region's performance only	✗	✗	✓ (own region)	✓ (own region)	✓ (own region)	✗
Sales Manager	Sales, orders, customers, targets	✓	✓	✓	✗	✓ (all regions)	✓

Authentication Analysis

Feature	Username and password	Organizational account (Entra ID)	Multi-factor authentication
How it works	User enters a stored username and password	User signs in with a company account managed centrally	A password plus a second proof (app code, SMS, biometric)
Main risk	Passwords can be guessed, stolen or reused	Account compromise if the password leaks	Lowest, since a stolen password alone is not enough
Management	Managed separately per system	Central control, single sign-on, easy to disable leavers	Added on top of either method
Security level	Low	Medium to high	Highest
Suitability for BI	Not recommended on its own	Standard for Power BI	Recommended for executives and admins

Access Control Matrix

User role	View	Edit	Share	Admin	Justification
BI Administrator	✓	✓	✓	✓	Manages the workspace, users, security and refresh
BI Developer	✓	✓	✗	✗	Builds and edits reports but cannot change workspace access
CEO	✓	✗	✗	✗	Reads results and needs no edit rights, which reduces the risk of accidental changes
Finance Manager	✓	✗	✗	✗	Profit data is sensitive, so sharing is not allowed
Regional Manager	✓ (own region via RLS)	✗	✗	✗	Sees only their region, in line with least privilege
Sales Manager	✓	✗	✓ [limited]	✗	Shares sales reports with the sales team, but doesn't change the data model

Row-Level Security Design

RLS role	Table	DAX filter rule	Users
Central_US_Manager	Orders	[Region] = "Central US"	Central US regional manager
Executives (no rule)	none	No filter, sees all rows	CEO, Finance Manager
Southern_Asia_Manager	Orders	[Region] = "Southern Asia"	Southern Asia regional manager

Security Risk Assessment

Sum of #	Risk	Description	Impact	Likelihood	Mitigation
3	Data leakage	Data exported to Excel or CSV, shared links forwarded, or screenshots shared	High	High	Sensitivity labels, restrict export, limit sharing, train users
2	Excessive permissions	Users hold more access than they need	High	High	Least privilege, assign roles by job, review quarterly
5	Missing RLS	Regional managers see other regions' data	Medium	Medium	Implement and test RLS roles before publishing
6	Outdated accounts	Leavers or role-changers keep access	Medium	Medium	Remove access on leaving, regular audits
1	Unauthorized access	Someone without permission views the reports	High	Medium	Entra ID login, MFA, workspace roles, regular access reviews
4	Weak authentication	Weak or reused passwords, no MFA	High	Medium	Enforce MFA and strong password policy

Security Recommendations

Sum of #	Recommendation	Priority	Owner
2	Apply least-privilege roles and review them quarterly	High	BI Administrator
6	Audit access logs and remove inactive accounts	Medium	IT Security
1	Enforce MFA for all users, especially executives and admins	High	IT Security
3	Implement RLS for all regional users and test it with "View as"	High	BI Developer
5	Limit sharing to named users or groups, not "anyone with the link"	Medium	BI Administrator
7	Train users on data-handling and phishing awareness	Low	HR / IT
4	Use sensitivity labels and restrict export for confidential reports	Medium	Data Governance
